

CSCI 4440 — Software Design and Documentation
Peer Reviews (document version 1.0)
DUE by 11:59PM ET on December 10, 2020

Overview

- Peer reviews are to be completed individually
- Peer reviews are quite common in industry as an organized means of evaluating team members; two key goals here are to highlight the “good” and identify the “bad”—more specifically, for each success criterion or metric, talk about what each team member did well and where they could have done more
- **Note that we will not share these critiques with your team members; further, this will not impact on the course grades your team members receive**

What to do

For your peer reviews, you are to individually review each of your team members based on the success criteria that you identified with your team at the beginning of the semester, i.e., in Team Deliverable 2. You should have identified at least five and no more than eight such criteria.

Also, please write a few sentences of overall critique of each of your teammates.

Please organize your reviews by listing each team member, then providing feedback by following this pattern:

- **Team Member 1 Name**
 - Success criterion 1
 - Success criterion 2
 - Success criterion ...
 - Success criterion n
 - General critique and feedback
- **Team Member 2 Name**
 - Success criterion 1
 - Success criterion 2
 - Success criterion ...
 - Success criterion n
 - General critique and feedback
- **etc.**

What to submit

Please submit a single PDF file using the above format. As per usual, **proofread your work** before submitting. We will assign grades based on the above details and the quality of your writing.
